

Concrete Steps for going open source – what is necessary? [*Questions I ask myself*]

1. Convince your boss (and your boss-boss)
2. Figure out the „how to“ / concept / concrete steps
 - Which licence?
 - Mode of going open source
 - Put code on homepage / zip file? GitHub?
 - How to deal with input data that is closed?
 - How to deal with code commenting?
 - How to deal with questions on the code/data?
 - Does open source mean the user should be able to download and use model as is? Which users do I think of (fellow researchers?)?
3. Do it.
